The returns quoted represent past performance, which is no guarantee of future results. Returns and the principal value of your investment will fluctuate. Current performance may be higher or lower than that shown above, and you may have a gain or a loss when you redeem your mutual fund shares/annuity account accumulation units. For current performance information, including performance to the most recent month-end, call 800 TIAA-CREF (800 842-2273).

¹ Accumulations in mutual funds not managed by TIAA-CREF may be subject to administrative charges. These charges are subject to change. Please review current documents related to your plan.

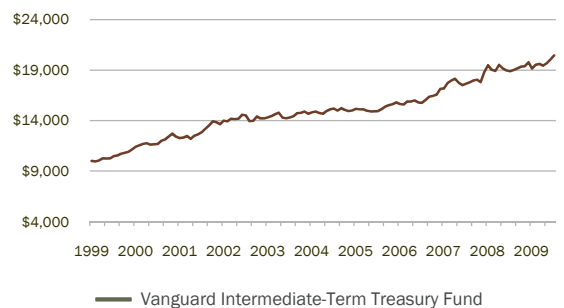

² The comparative indices used for this investment product have been provided by Morningstar Inc. and may not match those that appear in other websites or publications.

ABOUT THE BENCHMARK

The Barclays Capital U.S. Government Bond Index measures the performance primarily of U.S. Treasury and agency securities and corporate bonds with 5- to 10-year maturities. You cannot invest directly in any index.

HYPOTHETICAL GROWTH OF \$10,000

An investment of \$10,000 on December 31, 1999 would have been worth \$20,452 on June 30, 2010, including the reinvestment of dividends and distributions.

The chart illustrates the performance of a hypothetical \$10,000 investment made in the account on the date indicated. The account total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains, net of all recurring costs.

IMPORTANT INFORMATION

³ The top 10 holdings are subject to change and may not be representative of the fund's current or future investments. The holdings listed only include the fund's long-term investments. Money market instruments and/or futures contracts, if applicable, are excluded. The holdings do not include the fund's entire investment portfolio and should not be considered a recommendation to buy or sell a particular security.

⁴ Option-adjusted duration estimates how much the value of a bond portfolio would be affected by a change in prevailing interest rates. It takes into account options embedded in the individual securities that might result in early repayment of principal, thereby shortening their duration. The longer a portfolio's duration, the more sensitive it is to changes in interest rates.

⁵ The maturity date is the date on which the principal amount of a security becomes due or payable. Duration indicates the price sensitivity of a bond to changes in interest rates: the lower the duration, the lower the bond's potential volatility and vice versa. We seek to keep this portfolio's average duration similar to the benchmark's.

Vanguard Intermediate-Term Treasury Fund is offered through a TIAA-CREF pension plan at net asset value (NAV) and the performance is displayed accordingly. Performance at NAV does not reflect sales charges, which are waived through your pension plan. If included, the sales charges would have reduced the performance quoted.

TIAA-CREF Individual & Institutional Services, LLC, and Teachers Personal Investors Services, Inc., members FINRA, distribute securities products. You should consider the investment objectives, risks, charges and expenses carefully before investing. Please call 877 518-9161 for a prospectus that contains this and other information. Please read the prospectus carefully before investing.

MORNINGSTAR DISCLOSURE

The Morningstar Category classifies a fund based on its investment style as measured by underlying portfolio holdings (portfolio statistics and compositions over the past three years). If the fund is new and has no portfolio, Morningstar estimates where it will fall before assigning a more permanent category. When necessary, Morningstar may change a category assignment based on current information.

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return (including the effects of sales charges, loads and redemption fees) is plotted on a bell curve. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% earn 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. Morningstar Rating™ is for individual share classes only. Other classes may have different performance characteristics.

A NOTE ABOUT RISKS

As with any investment, fixed-income mutual funds and annuity accounts are subject to a number of risks, including all or some of the following:

Interest Rate Risk, the risk that the market value of fixed-income securities may fluctuate when interest rates change; **Prepayment Risk**, the risk that the issuers of individual securities may prepay them at a time when interest rates have declined; **Extension Risk**, the risk that the value of individual securities will decline because principal payments are not made as early as possible; **Company Risk**, the risk that the financial condition of a company may deteriorate, causing a decline in the value of the securities it issues; **Income Volatility Risk**, the risk that the income from a portfolio of securities may decline in certain interest rate environments; **Credit Risk**, the risk that the issuers of individual securities may default; **Risks of inflation-indexed bonds**, the risks that interest payments on inflation-indexed bonds may decline because of a change in inflation (or deflation) expectations; **Illiquid securities risk**, the risk that illiquid securities may be difficult to sell at their fair market value; **Foreign Investment Risk**, the risk that securities of foreign issuers may lose value because of erratic market conditions, economic and political instability or fluctuations in currency exchange rates, which may be magnified in emerging markets; **Active Management Risk**, the risk that a fund/account may underperform because of the allocation decisions or individual security selections of its portfolio manager; **Index Risk**, the risk that a portfolio's performance may not match that of its benchmark index. For a detailed discussion of risk, please consult the prospectus.
